Recent Projects

Business Intelligence – DPaschoal

2023 – Present

Currently, in a partnership between PUC-Campinas and DPaschoal, I am involved in the implementation of web pages with dashboards using **Business Intelligence** concepts to provide the company with deep insights about their customers and other relevant information. The dashboards are being developed using technologies such as **Power BI**, **React.js**, **Express.js** e **SQL Server**.

Timer Feed

2023

Applying concepts in React, such as **immutability**, **lists and keys**, **properties**, **Styled Components**, **Hook Forms**, **Router**, **Context**, **Reducer**, **Immer** and **Zod**, I created a timer based on the pomodoro technique.

Via Fácil

2022

This web application aimed to change the way people obtained their counterpart copy by making it easier through a centralized platform. Utilizing modern technologies like **React.js**, **Spring Boot**, and **MongoDB**, the application offered users options for traditional login and QR code scanning, both utilizing **JWT authentication**.

Extracurricular Activities

Python Teaching Assistant (2022)

As a Python teaching assistant, I shared knowledge, guided, and helped students at PUC-Campinas master this versatile, powerful, and widely used language.

Vitalità 70+ – Volunteer Work (2022)

I assisted over 10 elderly individuals with personalized training to use recent technologies such as the Microsoft Office suite or other software relevant to their daily lives and professions, increasing their digital independence.

Tech Stack

- HTML5 | CSS3
- JavaScript
- TypeScript
- React.js
- Docker
- Git | Github
- Python
- Java
- C | C++
- Kotlin
- Flutter
- Pacote Office
- Power BI
- SQL (Oracle)
- MongoDB
